

# YPSILON POWER PRICER

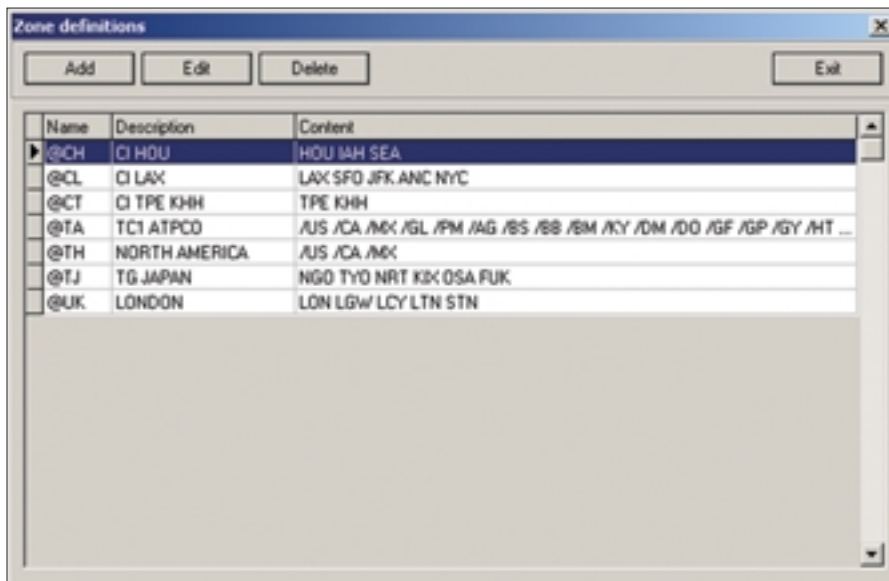

Power Pricer enables you to manipulate Published IATA fares, net fares, charters as well as low-cost carrier service fees in order to give consolidators or travel agents independence from zero-commission restrictions. It even allows the mark-down of fares that qualify for special commission contracts, like override commissions, channel-tunnel fees and so on. Mark-ups and percentage off can be defined totally independent from each other, using various criteria.

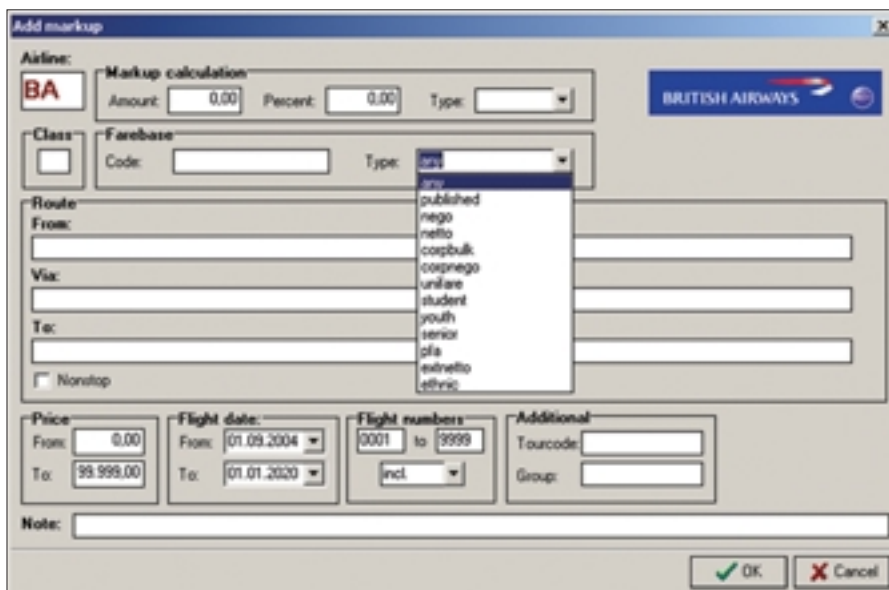

## They can be based upon:

- Airline.
- Booking class.
- Farebase and fare type.
- Departure airports.
- Arrival airports.
- Flight date ranges.
- Flight numbers.
- Price ranges.
- Routings (certain VIA points as an include or exclude).

Any combination of these criteria is permitted, providing unlimited possibilities and ultimate flexibility.

Zone definition

Routing definition

All calculated published fares appear immediately in the booking engine within seconds of being defined in the Power Pricer.

Editing or deleting is possible at any time!

A detailed summary of what actually happened with the original fare will be supplied in the PNR.

Selection criteria can be extended.
